

FRESHWATER FISH

sampling **hot spots** and **cool spots**

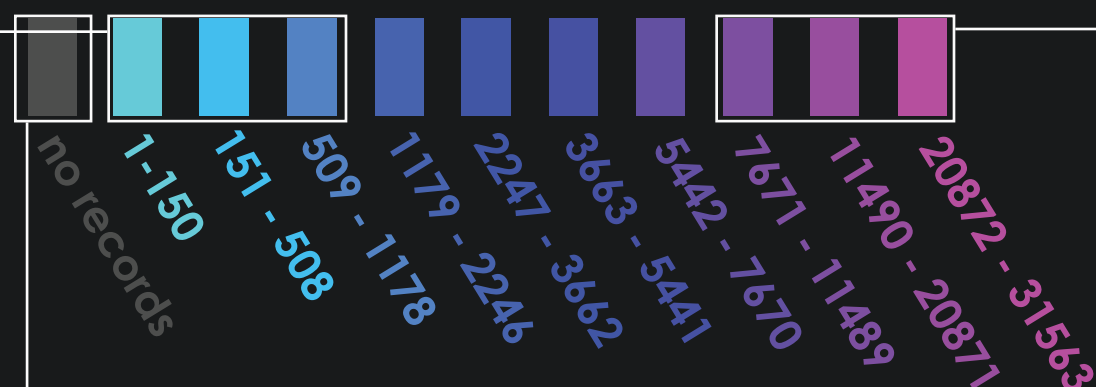

mapping occurrence records from museum fish collections around the world reveals regions where lots of effort is being applied to measure fish biodiversity; and those regions in dire need of surveys to quantify local ichthyofauna

COOL SPOTS:
regions with below average
freshwater fish biodiversity sampling

Alaska
Canada
S. America
S. Africa
W. Europe
E. Africa
W. Africa
S.E. Asia

NO. OCCURRENCE RECORDS

HOT SPOTS:
regions with above average freshwater
fish biodiversity sampling

S.W. US
E. US
S.E. US
Sweden
Italy
Japan
E. Australia
New Zealand

VOIDS: regions without sampling records

Greenland Argentina N. Africa Middle East Russia Hungary China W. Australia Central Australia
